W-ULP-8040 membrane element

ULP membrane elements series can achieve the desired permeate water and high desalination rate under ultra-low/extreme-low pressure operation conditions. It is suitable for desalination treatment of surface water, groundwater, tap water and municipal water with salt content less than 2000 ppm.

W-BW-8040 membrane element

BW membrane element series have the characteristics of high water production and good desalination performance. It is suitable for desalination treatment of surface water, groundwater, tap water and municipal water with salt content less than 10,000 ppm.
